To ensure a fair and comprehensive evaluation of all projects, the following judging criteria will be used:

1. **Innovation and Creativity**
   a. Originality: How unique and original is the idea?
   b. Creativity: Does the project offer a novel approach to solving the problem?
2. **Technical Implementation**
   a. Complexity: How challenging was the technical implementation?
   b. Functionality: Does the project work as intended? Are there any bugs or issues?
   c. Scalability: Can the project be scaled for larger audiences or different use cases?
3. **User Experience and Design**
   a. Usability: Is the project easy to use and understand?
   b. Interface: How intuitive and visually appealing is the user interface?
4. **Impact and Usefulness**
   a. Relevance: How relevant is the project to the problem statement?
   b. Benefit: What potential impact does the project have on its intended users or the community?
5. **Presentation and Communication**
   a. Clarity: How is the project idea communicated?
   b. Demonstration: How well is the project demonstrated and explained during the presentation?

Bonus Points

1. **Team Collaboration:** How well did the team work together? Was there a clear distribution of tasks?
2. **Sustainability:** Does the project consider long-term sustainability and potential for future development?

Mentor specific criterias:

1. Github repo. Maintenance
   a. Time to time commits
   b. Proper commit messages
   c. Commit from all the members(team collaboration)
   d. README file maintenance
2. Code quality
   a. Modularity followed.
   b. Basic code practices like commenting, proper variable and function naming, etc. are followed.
